General metrics used to score all vivas (read-only)

Official mark: 50% AI performance mark + 50% technical accuracy (technical viva). The AI mark is the equal-weighted average of three components (1/3 each). A component with no usable data is dropped and the others are re-weighted. An incomplete recording is not a zero.

1. Engagement (1/3): CNN frame engagement score; facial confidence; facial emotion profile; on-camera gaze ratio; head stability; blink rate (all equal parts).
2. Audio acoustics (1/3): pitch stability; voice clarity (HNR); jitter; shimmer; emotional tone of voice (half weight).
3. Speech delivery (1/3): pace (target about 120-160 words per minute); hedges; fillers; long pauses; sentence completion.
4. Technical accuracy: each subject concept scored 0-10 and weighted; a concept the student never mentions scores 0. The examiner confirms the score; it is never published automatically.

Quality gates (recording marked INCOMPLETE, no official mark): no usable face; face turned away; more than one person in frame; no speech; no lip movement; unusable audio; nothing scorable. Note: gaze, head stability and speech emotion are proxies not yet validated against labelled vivas.
